

# CLEARLOCK

## EXTERNAL CLEAR COATING SYSTEM

High performance, one-component clear coating system for external applications such as rooflights, windows and architectural tiles

Clearlock is a clear, single component coating system for protecting rooflights and windows from water ingress, chemical attack and UV radiation. Additionally, it increases the strength of the substrate, creating a simple shatter inhibiting coating for glass and similar fragile materials.

Clearlock is a moisture triggered, aliphatic system that is UV resistant and does not discolour with age. It cures to form an easy-maintenance, semi-gloss surface that is resistant to both heat and frost.

### **BENEFITS**

- UV resistant
- Non chalking
- Non-yellowing
- Barrier to carbon dioxide diffusion
- Extends life of rooflights
- Increases strength of glass
- Helps to waterproof and seal cracked rooflights
- Resistant to heat and frost
- Semi-gloss surface that is easy to maintain

### **APPLICATIONS**

- Shatter inhibiting coating
- Rooflights
- Windows
- Architectural tiles
- Warehouses
